ID luminaire series

ONTERO, INTARA, PENDIRO

The new ID luminaire series from BÄRO combines high light and product quality with the special range of LED light colours and the demands of attractively designed retail and display lighting which showcases the products. As a flexible system with several power ratings, light distribution patterns and the unique variety of 11 different LED spectrums that is specific to BÄRO, the ID luminaire series offers a lighting solution tailored to every requirement.

ID technology

STATE OF THE ART

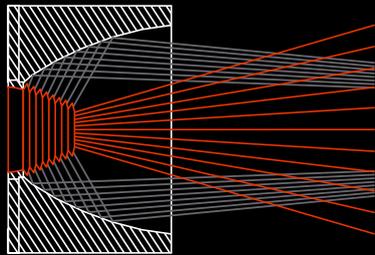

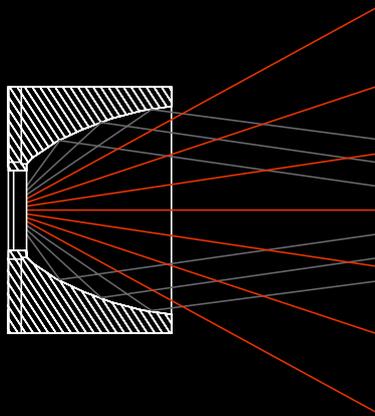

The ID luminaire series represents state-of-the-art technology. The innovative and highly efficient LED lighting technology with a hybrid construction combines the advantages of reflector and lens systems.

This combination produces a particularly balanced contrast between the focal point and the corona of the light cone. Furthermore, different reflectors combined with semi-satinated cover glass enable the production of clean and soft, yet clearly defined light cones.

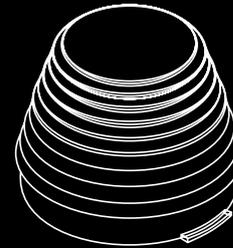

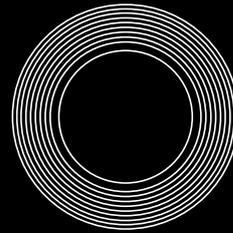

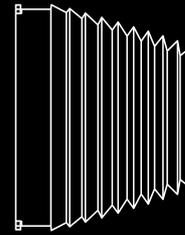

ID TECHNOLOGY

With the newly developed LED hybrid technology, a special 3D silicone lens on the LED module ensures that less light is directly emitted and more light reaches the target surface in a controlled manner via the reflector facets. The innovative silicone lens material offers a number of advantages over standard materials for LED lenses: it combines excellent optical properties with high resistance and precision.

LED HYBRID
TECHNOLOGY

Comparison of light cone without
(top) and with silicone lens (bottom)

ADVANTAGES OF THE
BÁRO SILICONE LENS:

- Form-retaining and temperature resistant $> 150^{\circ}$
- Resistant to ageing in visible and UV light
- Very high transmittance
- Extremely high optical quality thanks to precisely moulded structures
- Flexible and therefore particularly mechanically robust

ID design

STRIKING AND ELEGANT

The striking, elegant design, cutting edge technology and high light and product quality are the key features of the ID series and ensure that the luminaires are durable and sustainable products. The modular construction, compact dimensions, high-quality feel and interplay of materials make it a pleasure to use and handle the ID luminaires. The systematic structure of the luminaire series, comprising spotlights for mounting on conductor rails, recessed luminaires for ceiling installation and suspended luminaires, enables planners and users to develop extremely flexible and differentiated lighting concepts with a consistent design language.

THE NEW DESIGN LANGUAGE

The Ontero ID surface-mounted luminaire boasts a striking, integrative design. The asymmetrical characteristic, the compact dimensions, the high-quality feel and the interplay of materials are the distinguishing features of this all-round lighting tool.

LED hybrid technology
The newly developed combination of reflector and lens system produces light distribution patterns with clean and soft light cones.

6 beam characteristics
4 rotation-symmetrical (NarrowSpot 10°, Spot 20°, Medium 25°, Flood 44°),
2 asymmetrical (OvalBasic 60° x 40°, WallBeam).
OvalBasic can be pivoted by 90°.

Variable applications
As a flexible, adjustable system
Ontero ID enables new, precise lighting concepts.

6 BEAM CHARACTERISTICS:

- 4 ROTATION-SYMMETRICAL
(NarrowSpot 10°, Spot 20°,
Medium 25°, Flood 44°)
- 2 ASYMMETRICAL
(OvalBasic 60° x 40°, WallBeam*)
OvalBasic can be pivoted by 90°

Ontero ID WallWasher

FORM FOLLOWS FUNCTION

The asymmetrical light distribution of the linear Ontero ID wallwasher ensures very good uniformity in a horizontal direction, generates a point in the field of vision and enables lighting almost flush with the ceiling, even with large spacings between the luminaires or high ceilings.

Linear

The housing design follows the contour of the reflector system and therefore the function.

More visual comfort

The indirect light channelling ensures very good glare control and a high degree of visual comfort.

Uniform design

With its end caps in die-cast aluminium and the perforated metal, the wallwasher incorporates striking design features of the ID series.

Intara ID

LOW-KEY FLEXIBILITY

The Intara ID semi-recessed luminaire combines the low-key look of a recessed luminaire with the flexibility of a surface-mounted spotlight. With extremely small gap widths, the design adds an unobtrusive yet recognisable and elegant accent to the look of the ceiling.

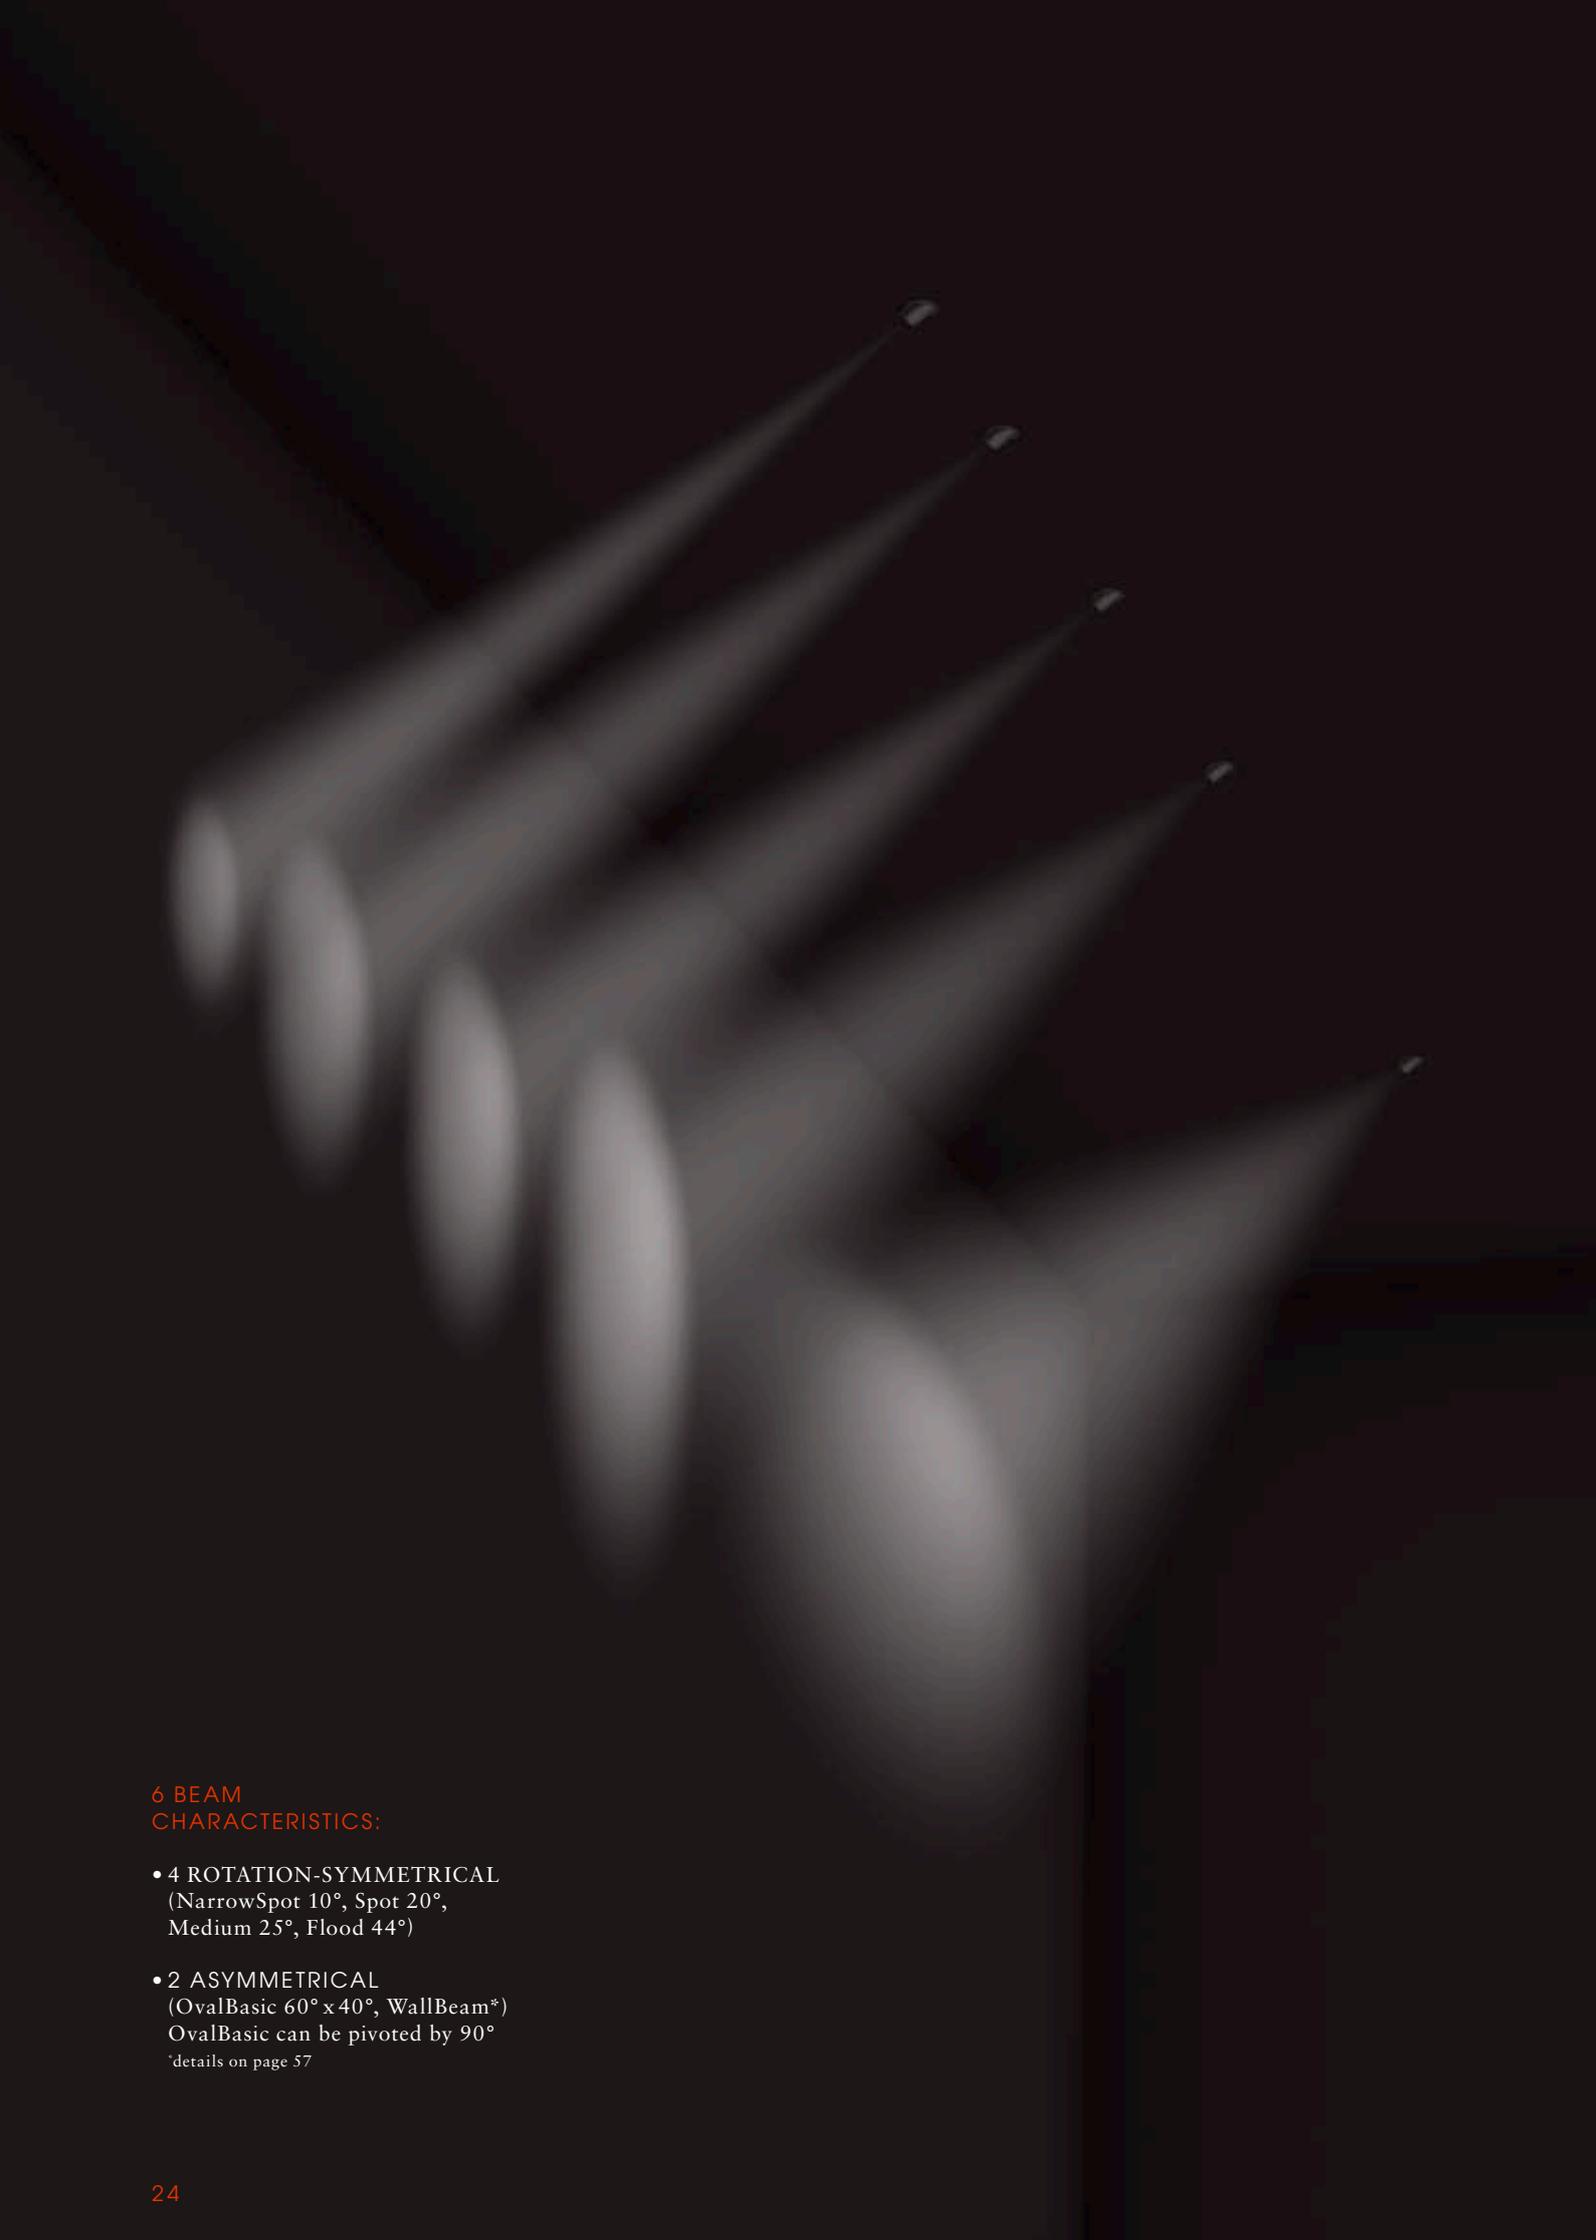

Swivel-tilt mechanism

The patented swivel-tilt mechanism enables the luminaire to be precisely swivelled by 35° and rotated by 355° with minimal gap widths while retaining the characteristic design features.

Uniform design

The asymmetrical shape of the luminaire head is a reference to the close relationship to the surface-mounted luminaire and the suspended luminaire from the ID series.

Further information and light distribution curves starting on page 42

We believe that there is a difference between lighting and light. And that light has the power to touch people, to inspire them and to activate them. With this conviction – and decades of experience – we develop unique BÄRO special light colours.

This means that there is not one light for everything. But precisely the right light for every individual requirement – so that every product is shown in the best light.

BÄRO. The Colour *of* Light.

In the right light

SPECIAL LIGHT COLOURS

Light that optimises the natural colours of products is one of the most effective, but also one of the most sophisticated tools of retail lighting. Thanks to decades of experience, BÄRO has the corresponding products, technologies and the necessary expertise.

Light creates an atmosphere – and it supports the sales-promoting presentation of all kinds of products. From fresh food-stuffs to non-food products, fashion and leisure goods – lighting with a coordinated spectral composition can render the colour, material and surface properties of products in a way that showcases them and makes the best possible impression on customers. Successful sales-promoting lighting therefore deliberately engages with expectations and visual habits – and evokes positive associations.

For example, you see a ripe red apple in the fruit display. Its colour impression depends on several factors at this moment: an artificial light source illuminates the apple with white light with a certain spectral composition, which rarely corresponds to the continuous spectrum of sunlight. On the other hand the surface of the apple absorbs part of this light spectrum while reflecting other components of the light. These catch

the eye, where sensory cells measure the blue, green and red components of the light and convey them to the visual centre of the brain: ultimately, a subjective colour impression is created.

As not the whole spectrum, but only three selective colour bands are measured and processed by the brain, the “metamerism” phenomenon occurs: light with a different composition can produce the same colour impression for the viewer – and body colours that looked the same under certain lighting may differ greatly under different light.

For product illumination this means: if artificial light spectrums can be technically influenced, the perception of certain colour shades typical to products can be changed in a surprisingly wide range. Depending on the lighting, the red of the apple can appear warmer or cooler, more or less saturated. The art of product lighting that optimises the products’ own colours is

to use light spectrums tailored to different applications. BÄRO has been a trailblazer in this art for many years.

As far back as 50 years ago BÄRO used PAR lamps with special coatings and later high-pressure discharge lamps with special glass filters holding back defined spectral components for one of the most popular applications for light optimising natural colours: the illumination of fresh meat and cold cuts. This “SpecialMeat” light optimised the red and pink colours of the products so that they were shown to much better advantage than under the simple fluorescent lamps that were standard at that time.

Even this pioneering application shows that lighting that optimises the inherent colours of products is always a balancing act: on the one hand retailers and customers want an inviting product presentation, but on the other hand this must never cross the line into falsifying or masking

EuroShop 2017
Presentation of different special light colours

“LED technology offers numerous starting points for defining light spectrums.”

the products – a question of sensitivity and experience which BÄRO has acquired over many years.

Lamps and filters are now largely a thing of the past – BÄRO now exclusively develops LED luminaires and also has methods for using this technology to produce light spectrums that optimise the natural colours of products. The prerequisites for this are good, as LED technology offers numerous starting points for defining light spectrums. Standard white LEDs always initially produce blue light that is partly converted into other wavelengths through a phosphor coating. The mix creates white light. The choice of semi-conductor materials, the composition of the phosphors and, if applicable, the combination with coloured LEDs result in customised spectrums.

BÄRO works closely with technology partners to offer its customers an extensive range of standard and special light colours tailored to individual needs. At BÄRO, the standard light colours are the white tones

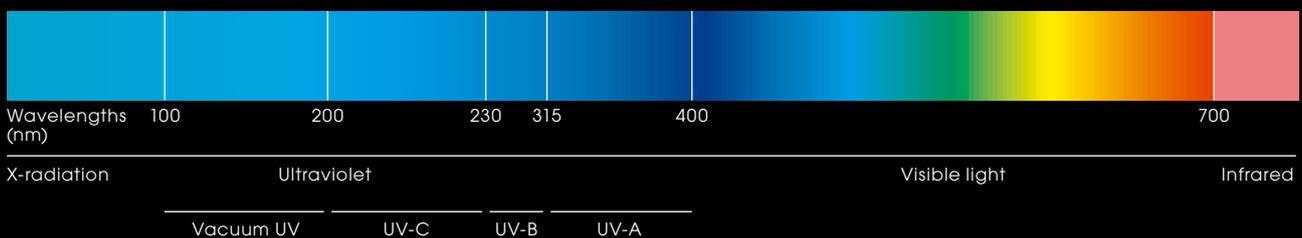

that are oriented to the “Planck curve” and are described with standard specification of the light colour number or the colour temperature in Kelvin. Here BÄRO already offers a wider range than usual, from warm white (2,700 K) to 3,000 K and 3,500 K and neutral white (4,000K). Customers can choose between excellent colour rendering quality with $R(a) > 90$ or slightly higher luminous efficacy yet still with good colour rendering quality $R(a) > 80$ as a particularly efficient solution in non-critical applications.

In addition to these standard light colours there are special light colours: LED modules where the spectrums and chromaticity points are not oriented to the Planck curve. They cannot be defined with standard specification of the colour temperature and colour rendering index, but rather by their respective practical

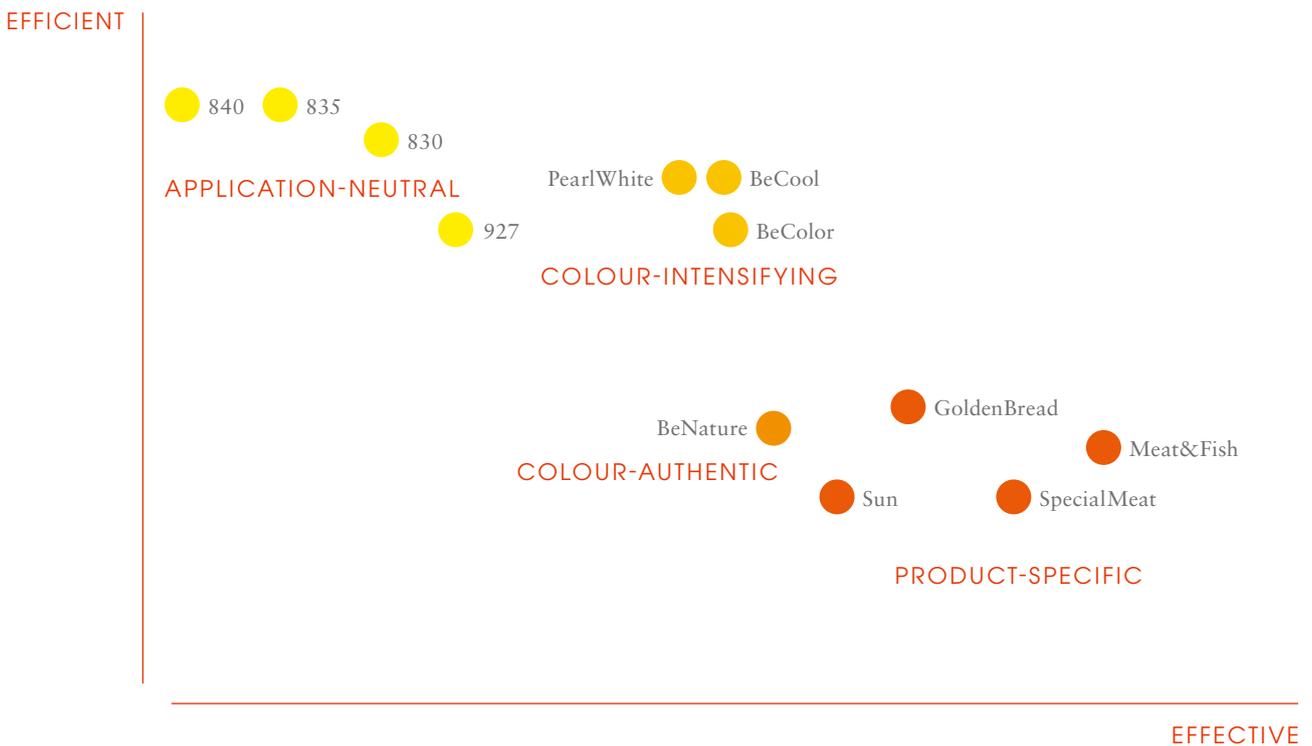

application. In addition to well-proven classics such as “SpecialMeat” for meat and cold cuts and “Sun” for fruit and vegetables, BÄRO is constantly researching new special light colours that take account of current technologies and market needs.

The light spectrum

Visible light is the small portion of electromagnetic radiation that the human eye is able to see without technical aids.

OVERVIEW OF THE AVAILABLE LIGHT COLOURS

The selection of the right light colour is always a balance between maximum efficiency and optimum product presentation

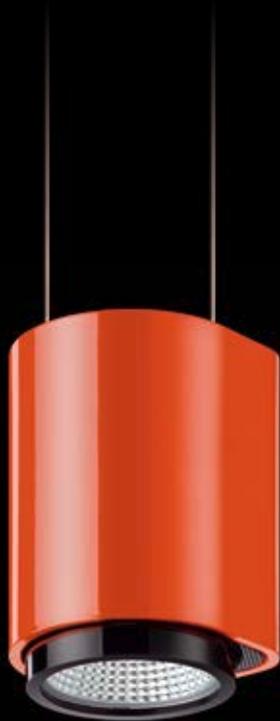

- Standard light colours with neutral colour rendering
- Special light colours with higher colour saturation (for EC only PearlWhite)
- Special light colours with a colour authentic spectrum
- Special light colours with an application-specific colour spectrum

Do not hesitate to contact BÄRO and take advantage of the company's expertise and experience if you would like to use light with a product-specific lighting effect in your projects as a retailer, retail designer or lighting planner. Our experts will be pleased to advise you – from the design to detailed planning, installation and alignment of the luminaires.

Customised design

BÄRO TAILOR-MADE

With BÄRO tailor-made, any colour from the RAL or NCS range can be selected as a paint finish for our luminaires – an offer that is of interest to both brand architects and designers of exclusive and unique interiors.

ID lighting technology

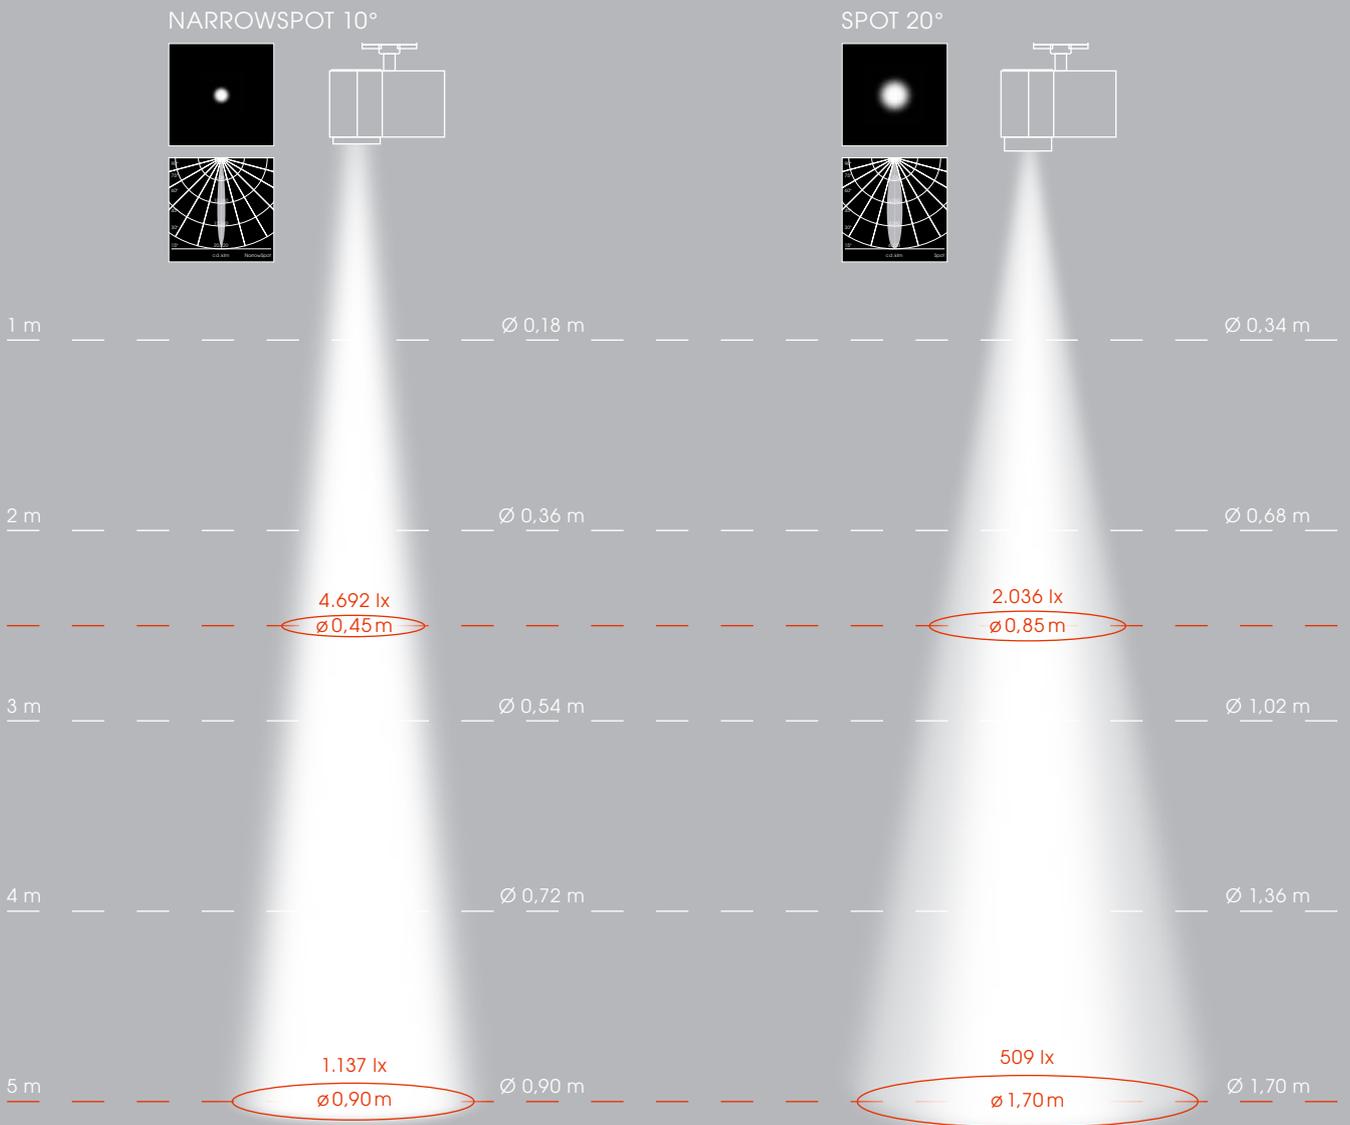

POWER RATINGS AND LIGHT SPECTRUMS

The LED modules of the ID luminaire series are available with 4 power ratings and 11 different LED spectrums – 4 standard light colours and 7 special light colours, fine-tuned to the natural colours of a wide variety of applications. Camera-capable LED drivers are used. Integrated potentiometers allow customisation of the spotlights' luminous flux. In addition, the series is available as a DALI version.

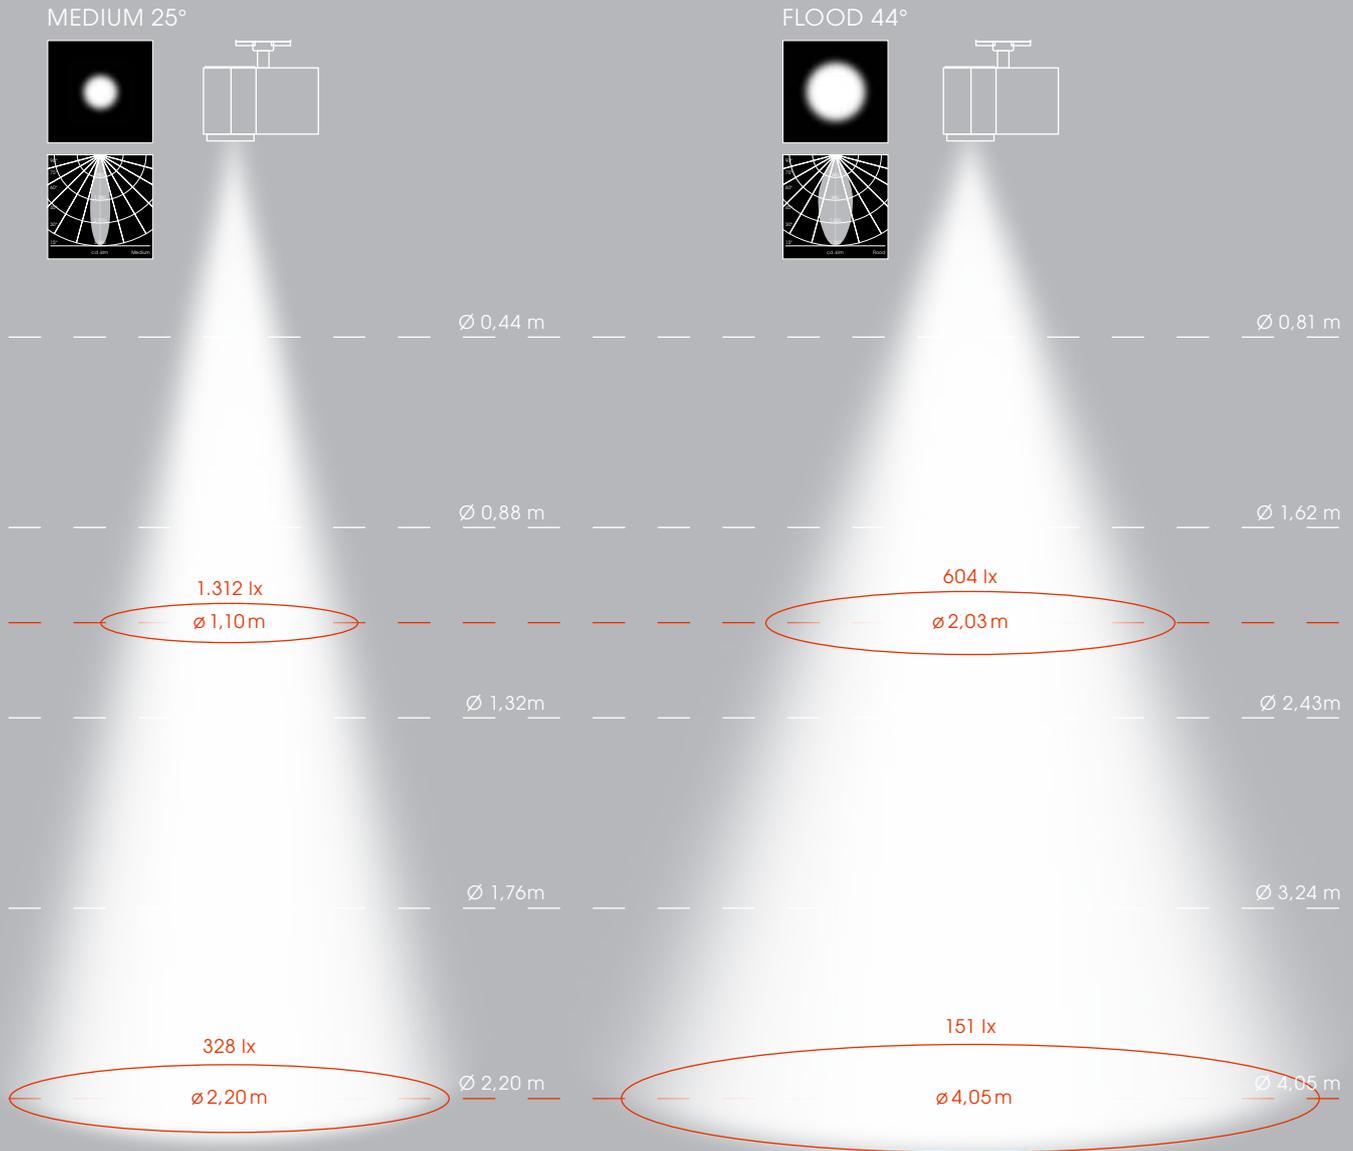

Beam characteristics

Exemplary change in beam angle and illuminance.

The beam angle defines the diameter of the light cone. A narrow, symmetrical beam angle (10 °) concentrates light so strongly that surfaces are brightly illuminated even at larger distances.

The cone of light diameter increases at a rotationally symmetric reflector proportional to the distance, while the illuminance decreases with the square to the distance.

The wider the beam angles (20 °, 25 °, 44 °), the larger the illuminated area, but with increasingly lower illuminance.

The values given in the examples apply to the Ontero ID, 830, 15 W, 2,000 lm.

927

Colour code

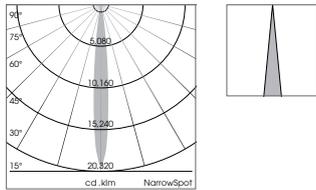

The warm white LED spectrum of the standard light colour is ideal for illuminating goods and product types with warm colours and for creating a harmonious atmosphere. The very good colour rendering gives the surfaces a high-quality appearance and even the smallest colour nuances are clearly apparent.

BeNature

Colour spectrum

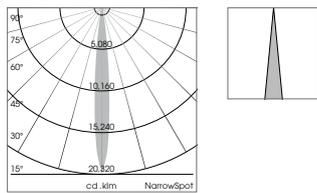

BeNature is an innovative, cross-application light color whose most similar color temperature is 3,000 K in the warm white range. With an excellent color rendering index Ra of 97, it is optimized for extremely authentic color rendering and a natural room atmosphere that promotes people's sense of well-being.

Sun

Colour spectrum

Sun intensifies all warm colours. The LED spectrum of the special light colour is both colour saturating and product specific, and its optimal application is the illumination of fresh fruit and vegetables or in comparable non-food sectors. The correlated colour temperature is 2,400 K.

Meat&Fish

Colour spectrum

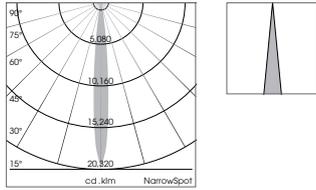

Meat&Fish is among the product-specific LED spectrums with a correlated colour temperature of 4,020 K. The chromaticity point is specially coordinated to the presentation of seafood. Due to the high red component, this special light colour is also suited to the illumination of fresh meat and cold cuts.

For more technical details about the individual luminaires, please see our datasheets available at www.baero.com. The luminaire luminous flux figures vary in a tolerance range of $\pm 10\%$. All data are typical values. System features may change if product improvements are made due to technical advances. Errors excepted.

SpecialMeat

Colour spectrum

SpecialMeat is the special light colour for the illumination of fresh meat and cold cuts and can be viewed as a modern LED successor to the proven SDW-T/ patented filter variant. The LED spectrum with a correlated colour temperature of 1,900 K is a product-specific special light colour.

Ontero ID

Surface-mounted luminaire

In the 15 W and 23 W power ratings Ontero ID is available as a On / Off or a DALI version. In the 41 W variant the brightness can be adjusted manually with a potentiometer. Alternatively, it is also available in a DALI version.

DRIVER UNIT

On/Off	76500050	[400 mA / 15 Watt]
	76500034	[600 mA / 23 Watt]
	76500076	[850 mA / 34 Watt]
DALI	76500051	[400 mA / 15 Watt]
	76500039	[600 mA / 23 Watt]
	76500077	[850 mA / 34 Watt]
Casambi	76500121	[400 mA / 15 Watt]
	76500122	[600 mA / 23 Watt]
	76500123	[850 mA / 34 Watt]

The driver units must be ordered separately.

Pendiro ID

Suspended luminaire

The variants for track mounting and ceiling mounting are always supplied as a DALI version. For the variant for ceiling installation the driver unit is included in the scope of supply. When placing your order please state the driver unit product number with the desired power output.

	76500034	[600 mA / 23 Watt]
DALI	76500051	[400 mA / 15 Watt]
	76500039	[600 mA / 23 Watt]

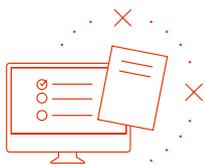

The canopies and the driver units must be ordered separately.

BÄRO – Your lighting partner. Right from the start.

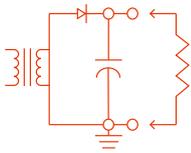

> **ADVICE**
Discover the potential.

A fundamental aspect of our advice is to convey to all those involved in the project the huge potential and the many nuanced possibilities of expression offered by the medium light today thanks to LED technology. Talk to our lighting consultants and find out about the impact that BÄRO products can have in your store – not just in view of effectiveness and efficiency, but also and especially in terms of the emotionality of light.

> **PLANNING**
Light that suits you.

Light can be designed in many different qualities and dimensions. Sophisticated light planning not only supports the dramaturgy of the shopping experience; it also allows the lighting to be perfectly tailored to the different visual tasks and product groups. We are committed to finding a customised, expressive light balance for every concept – through the interplay of light distribution and light channelling, light intensities and light colours.

> **INSTALLATION**
On site together.

Careful and professional installation is just as important as effective and creative lighting planning. BÄRO supports you in the installation and alignment of luminaires on site – so that your customised lighting concept rapidly takes shape and unforeseen issues are quickly resolved. In this way you can be sure that the lighting is perfectly focused on the room and the products.

> **SUPPORT**
Long-term cooperation.

Our products boast long-lasting quality and functionality. Nonetheless, our service does not end when your lighting system is put into operation. BÄRO is available to answer your questions and provide services even after completion of the project.

> **LEASING**
Efficient lighting.
Financed effectively.

Customised financing for a customised lighting concept. Whether you are a retailer or a retail brand, we will be pleased to advise you on a leasing concept that suits your specific needs. Together we will draw up a contract that caters to your wishes and the needs of your company. Contact us. We're pleased to assist you.
